Bilateral Meetings

- Friday 21st September 10:15 - 12:30

Description

EMMEDUE Advanced Building System is an innovative building system, whose core element is a modular panel industrially produced and made up of two galvanized electro-welded steel meshes, connected to each other by connectors, with an inner slab of expanded polystyrene. The Package offered by EMMEDUE includes the supply of the panel manufacturing plant and all connected services (engineering, installation, maintenance, training, etc.)
